

SpanishGenie Privacy Policy

Review version 0.2.0-free-test-review.2 | 17 October 2026

Prepared by Publicity for Dan and qualified legal review. DRAFT ONLY. No effective date or approved customer URL. Statements below describe the intended free test package. Owner verification and completed disclosures are required before they become customer promises.

Scope and responsible operator

This notice covers the SpanishGenies website, free Windows test download and permitted use, and related support. Real Checkout charges and Community Rewards payouts are inactive in this phase. This notice does not describe a running paid or Rewards service.

The responsible legal operator is not yet verified. Current formation direction is LanguageGenies alone, a Delaware C corporation directly owned by Dan; it is not formed and no IP transfer is assumed. Corporate Compliance coordinates FD1 operator facts and legal review; Publicity owns this draft. Provisional contact: mindstride@gmail.com. Branding or synthetic records establish neither controller nor contracting party. An approved public address and actual authority are still needed.

Typing and local product state

SpanishGenie processes keyboard input locally to provide its typing transformations. This processing is distinct from collecting a transcript. The required diagnostics must exclude typed text, document contents, secrets and raw identity. Native must verify the exact successor's behavior before a no-transcript or no-upload claim is approved.

The test design retains information needed to bind the build to its original Windows user installation, preserve legal declarations and trial history, and enforce its deadline. This includes the build and policy version, original installation event, fixed midnight deadline and time-zone provenance, first eligible ready-state time and trial deadline, and the document versions and content hashes declared.

These records serve continuity and enforcement, not marketing. They may include protected identifiers; they are not described as anonymous. Native, Installer and Commerce must supply the exact fields, storage locations, access, transmission triggers and deletion behavior before this paragraph is final. No hardware fingerprint or email requirement is assumed.

Declarations and offline use

Downloading, installing, opening or saving a PDF does not record legal acceptance. The required declarations precede normal use and preserve the versions, stages and original event history. Reconnection must not fabricate a new declaration or reset a trial. Acknowledging a privacy notice is not blanket consent to unrelated processing.

The accepted initial-trial design supports local declarations and first eligible use without initial Commerce contact. Actual successor network behavior still requires owner confirmation; this draft does not assert that every product or website interaction is offline.

Diagnostics and voluntary support

The required diagnostic location is the original unelevated user's temporary folder at %TEMP%\SpanishGenie\Logs. Installer and Native are to write dated, bounded diagnostic files automatically without a separate logging button. Local recording is not automatic transmission. Protected licensing and lifecycle stores are separate and must not be copied into that folder.

Installer's October 17 source report describes fixed stage/result labels, UTC times, component and operation identifiers, public source hashes, error categories and numeric error codes. This is source evidence, not proof of an installed successor. Native's exact diagnostic fields and both components' final retention and cleanup behavior remain verification items.

If you email support or deliberately send diagnostic files through an approved channel, the recipient receives the information you supply, including sender details, message contents and attachments. Do not include document contents, passwords, keys or payment details. No automatic customer log upload is authorized by this package. Dan's separate manual test-log exchange does not establish a general customer upload service.

Website requests and providers

Loading a website or downloading a file sends request information to its host. The last verified infrastructure observation, from September 7, recorded nginx request lines, network address metadata, timestamps, status and byte counts, referrers and user agents. It identified the WEB host in Atlanta, Georgia, United States, with provider backups enabled. These dated observations do not establish the final public test site's settings or complete processing locations.

Website's October 17 local download source reports no analytics, persistent browser storage, login or payment in that flow. PM and Website must confirm the actual released site's cookies, storage, scripts, request fields, recipients, hosting contracts and processing locations. A source test is not a served-site privacy audit.

The final notice must name the actual hosting and support processors and explain any other recipients, purposes and international transfers. No payment or payout processor is activated by acknowledging this draft. Future paid services need separate verified disclosures.

Use and sharing limits

Proposed purposes are providing the download and permitted test use, preserving declarations and trial/build history, diagnosing faults, answering voluntary support requests, and meeting applicable legal obligations. Do not add marketing, referral tracking, profiling or other purposes through this draft.

The operator must confirm and implement access and sharing restrictions before publication. Required disclosures include service providers and legally required disclosures. No general promise of verified security, anonymity, sale restrictions or worldwide compliance is inferred from this incomplete inventory.

Retention and deletion

The final notice must give each data category's retention period or meaningful retention criteria, including local protected state, diagnostic files, website logs, support messages, server records and backups. The accountable owner and deletion or recovery procedure must also be identified.

The September 7 observation of daily log rotation with 14 copies does not prove exact 14-day deletion. The October 17 diagnostic direction preserves files for manual collection and authorizes no new automatic deletion schedule. This draft therefore promises no invented number of retention days.

Uninstalling must not be described as erasing all records or resetting the trial. Installer and Native must confirm what remains locally and how a legitimate deletion or correction request is handled without falsifying original history. Expiry of the build is not automatic erasure of support, hosting or backup records.

Privacy requests and security

The proposed request contact is mindstride@gmail.com. Before publication, the operator must confirm who receives and handles requests for access, correction, deletion or other applicable rights, how identity is verified without excess collection, the available remedies and the legally required response periods. No operational service level is established here.

The final release must use safeguards proportionate to its actual data, access and processors. No system is absolutely secure. Technical owner evidence and qualified review must support specific claims about protection, transmission, backups and recovery.

Children and international availability

This draft approves neither a child-facing service nor collection of student rosters or children's information. Dan and qualified review must settle intended users, age eligibility, geographic availability, any required parental process and international privacy requirements. A public download without a tester login is not a legal determination about these questions.

Where applicable, the completed notice must explain lawful processing grounds, rights, complaint routes, recipients and transfer safeguards. No jurisdiction or lawful basis is selected by the current wording. Mandatory privacy rights remain unaffected.

Changes and approval

Materially changed documents require a new version and the applicable declaration before normal use. Viewing or saving a notice does not accept future changes. The approved version, immutable URL, delivered-byte hash and prospective effective date must be frozen together after facts and legal review are complete.

Until then, this is a review document. It must not be offered as an approved privacy policy or used to collect live customer declarations.
